

Nexus UI Enhancement Report

Objective

The user interface of the Nexus login application was redesigned to improve appearance, usability, and user experience while keeping the existing login functionality unchanged.

UI Improvements

1. Modern Theme

- Added a dark gradient background.

2. Glassmorphism Card

- Login form placed inside a semi-transparent card with blur and rounded corners.

3. Professional Typography

- Added a large 'Nexus' title and a 'Secure Login Portal' subtitle.

4. Icons

- Added username, password, and login icons using the Lucide React library.

5. Improved Input Fields

- Styled input boxes with rounded borders, focus effects, and placeholder text.

6. Modern Login Button

- Designed a full-width blue button with hover effects and centered icon.

7. Status Messages

- Replaced browser alerts with success/error messages displayed inside the login card.

8. Responsive Layout

- Centered the login form and made it suitable for different screen sizes.

Technologies Used

Next.js, React, Tailwind CSS, Lucide React Icons, Flask/FastAPI backend, and SQLite database.

Conclusion

The updated UI provides a cleaner, more modern, and user-friendly experience while preserving the original backend functionality. The application now has a professional appearance suitable for demonstrations, academic submissions, and portfolio projects.
